### Reflection Exercise

When I realized that I was taking a javascript class, I was very excited. At Dawson College, I did learn some Html and CSS, but I always wanted to learn a programming language. In the beginning, I thought this class was not going to be hard because I understood HTML and CSS pretty quickly. However, as we started getting deep and deep into it, it started getting hard. That being said, I still had a lot of fun and enjoyed programming.

There are many things that I liked, but my favorite would be adding sound to my work. This aspect of programming not only attracts the user but also allows them to see some of my personality through my music/sound choice. After this semester is over and if I have some time, I might add sound to my portfolio website to make it more fun. Another thing that I like doing is creating classes because it organizes the program and makes it easy to read. However, I still don't fully understand it.

Honestly speaking, I found this class a bit hard because I had difficulty understanding some of the material. Doing the if statements were the most challenging element for me. When I write the program, I still need to refer to other examples to help me think it through. But, the class lectures were very helpful.

I would say project 2 is my best project because I am creating little games and putting them together. The reason is for it is because I am applying everything that I have learned so far in this course. It's quite challenging but quite fun at the same time.

I am planning to revisit some of the programming aspects that I am not fully comfortable with during the Christmas break. And will test that knowledge by creating some more interesting and fun pieces of work.

Early Merry Christmas and Happy New Year!!!
